## REED Putting SkillCheck to the Test

REED Services, Britain's largest staffing company with over 200 offices throughout the United Kingdom, had just completed a major technical transition within the company, replacing a mix of outdated desktop computers throughout the organization with modern Windows workstations tied together in a company spanning wide-area network (WAN).

With this significant technology transformation came the need to update application software, including skills testing software. REED chose SkillCheck skills assessments from First Advantage as the most effective and advanced testing product available to replace the outmoded testing product they had been using previously.

SkillCheck's modular design made it easy for REED to create a WAN-based distribution strategy for SkillCheck system and product updates. And the test-customization capabilities of the SkillCheck product, coupled with First Advantage test-development services, has given REED the tools it needs to differentiate its testing from that of its competitors.

First Advantage's Assessment Solutions Division (formerly SkillCheck) has also created specialized computer literacy test modules for REED, to test job candidates, and to test their own staff to ensure REED personnel were ready to work with the new, modern technology being put at their disposal.

With the advent of new technologies, including multimedia testing for call centers, tests on the latest versions of Microsoft Office and new deployment options like Internet test delivery, the SkillCheck product enables REED to offer testing that meets virtually any customer demand for proof of proficiency.
