

SkillCheck Professional 3.1

This package contains Release 3.1 of *SkillCheck Professional* or *SkillCheck Professional Plus*. This release is compatible with Release 3.0 of SkillCheck. If you are using SkillCheck 3.0, you can safely install this product without losing any of your current scores or custom tests. **If you are installing on a computer with a version of SkillCheck before version 3.0, read the installation instructions carefully before installing this new product.**

If you need further information about this release or the release you are currently using, call SkillCheck Technical Support at **1-800-347-0395**. If you need information about additional products available from SkillCheck, contact SkillCheck Sales at **1-800-648-3166**.

SkillCheck Professional 3.1: New Features!

SkillCheck Professional 3.1 and *Professional Plus 3.1* systems offer several new features:

- **Go Back/Review** — This feature allows examinees to review and revise their answers to questions and to answer questions they may have skipped.
- **Enhanced Reporting** — A new **Formatted Report** option within the *SkillCheck Professional Database Viewer* allows you to create attractively formatted score reports.
- **High Resolution Scaling** — *SkillCheck Professional 3.1* and *Professional Plus 3.1* will now run in a window when running on systems with higher screen resolution than 640x480. This means you no longer need to change your computer's resolution to 640x480 before running SkillCheck testing. (**Note:** This feature is best used for Windows 95, 98, and NT systems, not on Windows 3.1 systems.)
- **Smart Tutorial** — The tutorial appearing before a SkillCheck test is now sensitive to the settings of the test (test time, feedback, etc.) and will only give instructions relevant to the test features that apply to the test.

Full details on these features are provided in the appropriate documentation chapters.

Please note: The text of the typing test in this release is different from that which appears in releases of *SkillCheck Professional* and *Professional Plus* previous to Version 3.0. Please see the *Typing Test* chapter of the documentation for the appropriate typing text.
